

B&H SURGICAL

Specializing in OB/GYN and GI Products

The World's Source for Quality OB/GYN Products

- German Stainless Steel Instruments
- HSG Catheters & Trays
- LLETZ LOOP Electrodes
- Uterine Manipulators/Injectors
- Endometrial Suction Curettes

B&H SURGICAL

Specializing in OB/GYN and GI Products

In 1998 **B & H Surgical** began its journey in Southern California by *specializing in OB/GYN and GI products.*

Today we are a nationally recognized company offering our customers a comprehensive product line that includes office gynecology, GYN surgery, GI endoscopy, plastic surgery, and radiology products. Within our specialty we strive to beat our competition in quality, price, and service.

Our extensive product line brings us into the OB/GYN practice with colposcopy, electrosurgery, and fertility supplies and then takes us into the hospital operating room with GYN surgery, laparoscopic and GI endoscopy instruments as well as the radiology department with women's imaging products.

At B & H Surgical our goal is to serve our customers with the utmost customer service and sales representation. We strive to provide our customers with the exact products required to meet their needs.

We hope that you will give us the opportunity to take care of your needs and implement this OB/GYN catalog.

Towel Clamps	72
Dermal Punches	72
Scalpel Handles	72

TMI1151 Zinnanti Uterine Manipulator/Injector

- Pear shaped balloon for optimal hold which is a better seal at the internal os
- Reduced catheter shaft (4.5mm) allows for easy insertion
- Flexible extension prevents cracking of luer fitting

LATEX FREE

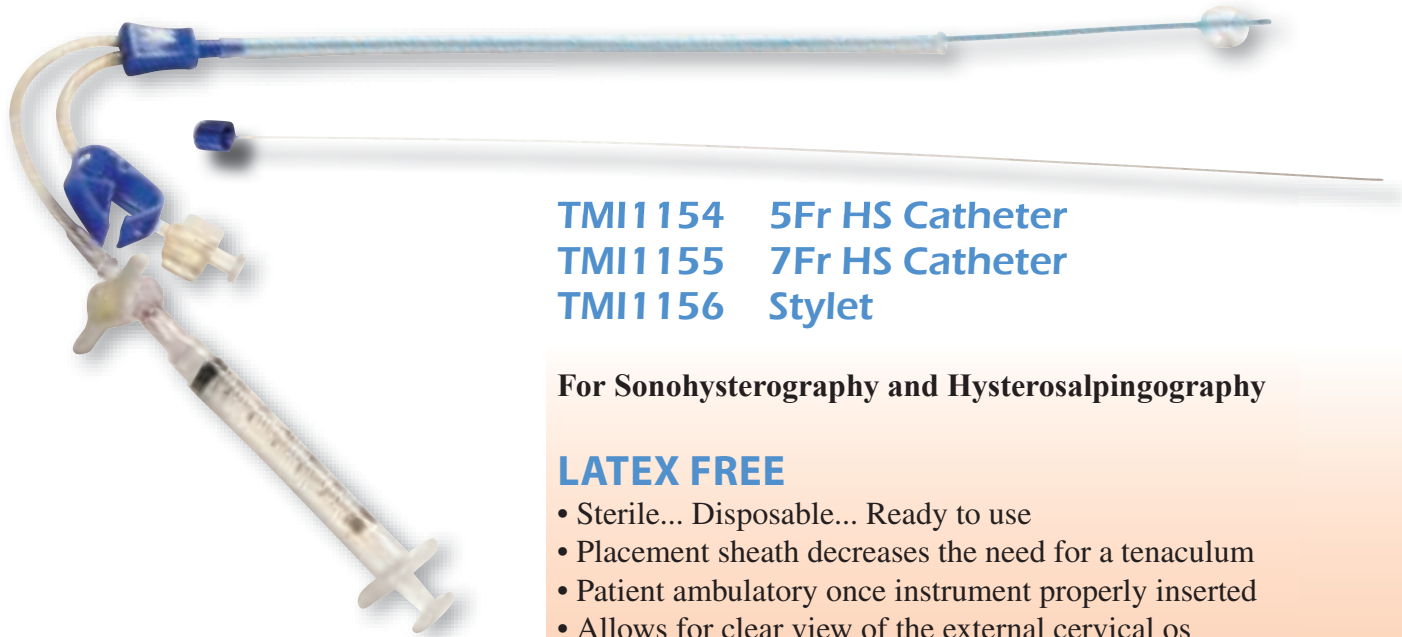

TMI1171 EZ Glide Manipulator

- New sliding handle adjusts after insertion and then locks into place to maintain a secure trauma free hold on the uterus
- Handle has larger grip for better leverage during manipulation
- Pear shaped balloon provides optimal hold which forms a better seal at the internal os
- Flexible extension prevents cracking of luer fitting
- Longer shaft to better accommodate Plus-Size patients
- Central lumen provides for easy injection
- Atraumatic beveled catheter tip protects uterine wall

LATEX FREE

Ideal for:

- Laparoscopic Tubal Occlusion
- Minilaparotomy
- Fertility Exams
- Laparoscopic Assisted Vaginal Hysterectomy (LAVH)
- Diagnostic and Operative Laparoscopy
- Salpingoplasty
- Laparoscopic Supracervical Hysterectomy (LSH)

TMI1154 5Fr HS Catheter
TMI1155 7Fr HS Catheter
TMI1156 Stylet

For Sonohysterography and Hysterosalpingography

LATEX FREE

- Sterile... Disposable... Ready to use
- Placement sheath decreases the need for a tenaculum
- Patient ambulatory once instrument properly inserted
- Allows for clear view of the external cervical os
- Stylet available for cases when additional stiffness is needed

TMI1157 HSG Tray

Sterile and ready to use

LATEX FREE

- 1 ea. Wrap CSR 30"
- 5 ea. Gauze 3"x3" 12 ply
- 1 ea. Medium Speculum, Welch Allyn
- 1 ea. Needle, 18G x 1 1/2"
- 2 ea. Swabsticks, OB/GYN 8"
- 1 ea. PVP Ointment, 1 gm
- 2 ea. PVP Solution, 1 oz
- 1 ea. Flexible Cervical Dilator
- 1 ea. Uterine Sound
- 1 ea. Syringe, 20CC
- 1 ea. Lubricating Jelly
- 1 ea. Drape with 2 1/2" Fenestration
- 2 ea. Sponge Prep Sticks 6"
- 1 ea. OB Pad
- 1 ea. Tray 9"x10"x2"
- 1 ea. Tray 5"x4"x1"
- 1 ea. Extension Tubing Set 36" M/F

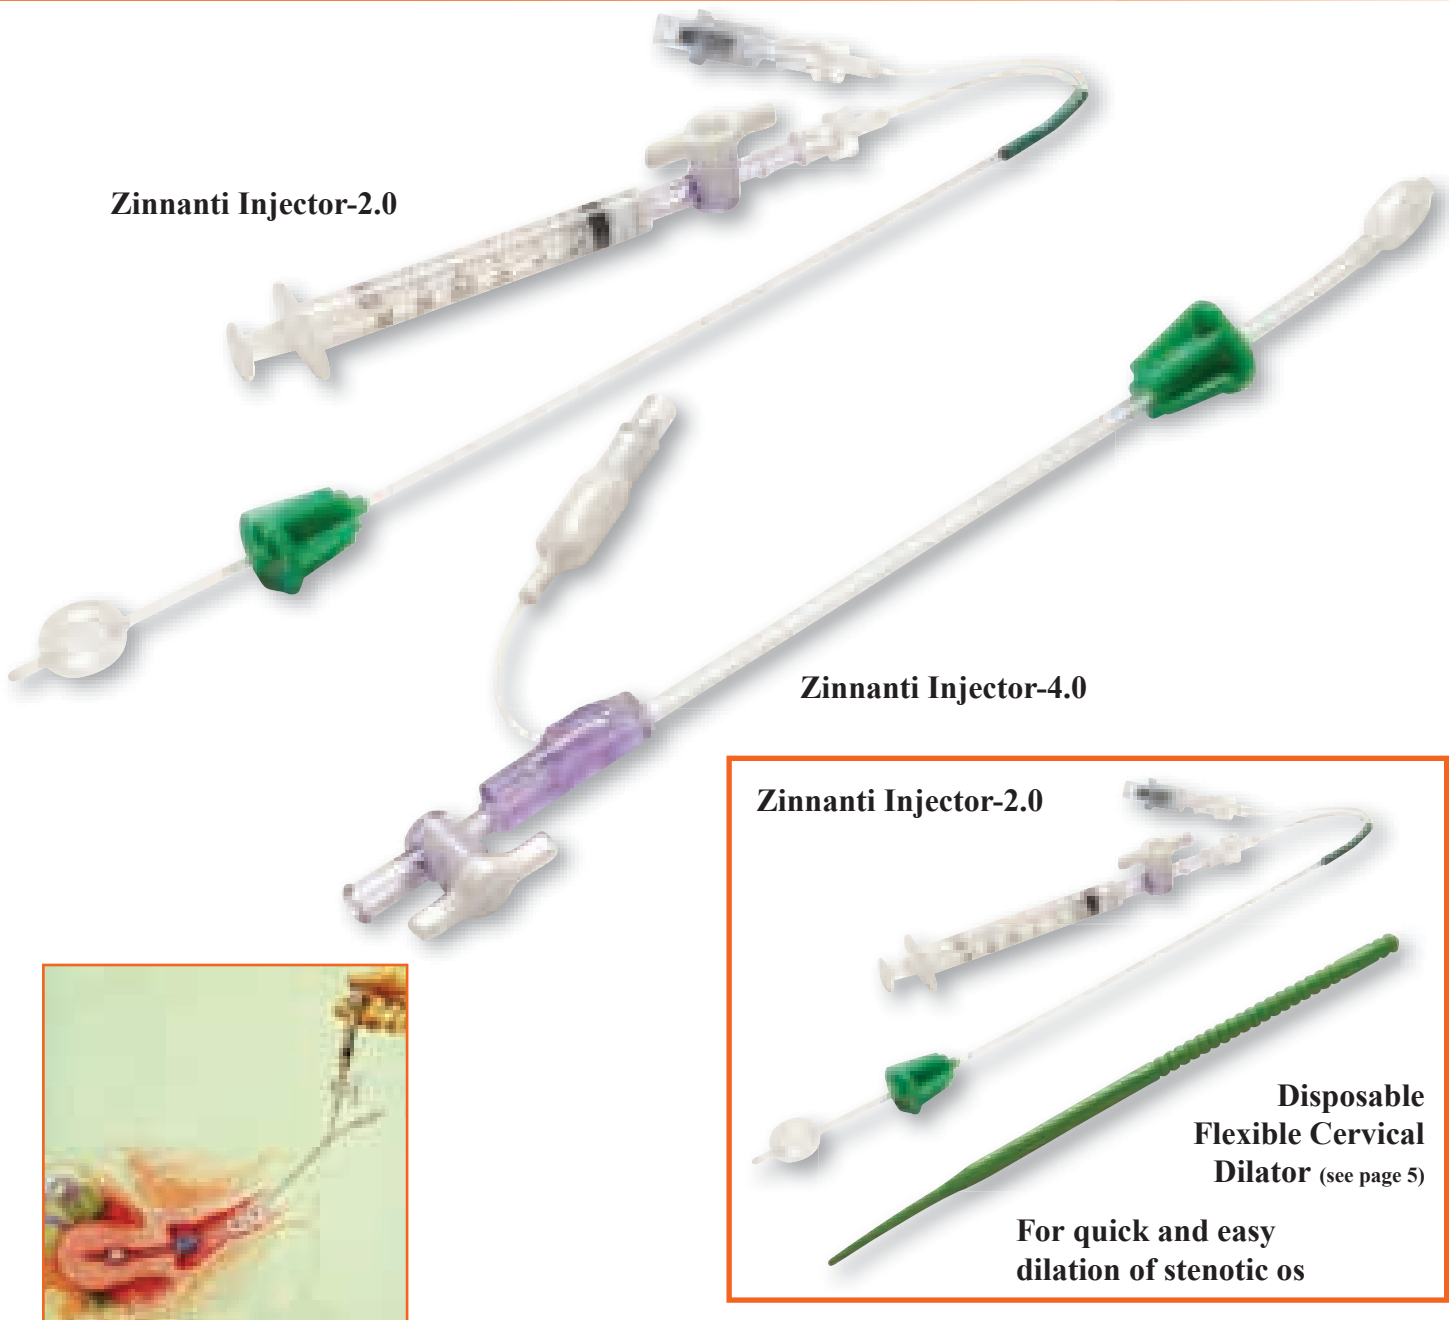

TMI1162 eZinject Catheter

- Sterile and ready to use
- Simple to use - insert and inject
- No distal balloon to block your view of the uterus
- Specially designed tip helps prevent leakage

TMI1170 Sono-Inject

- Sterile and ready to use
- 5Fr size for easy insertion
- Placement sheath decreases the need for a tenaculum
- No balloon for a clear view of the external cervical os

**TMI1153: Zinnanti Injector-2.0, Box of 12
(Includes 2 Disposable Flexible Cervical Dilators)**

TMI1152: Zinnanti Injector-4.0, Box of 12

LATEX FREE

- Sterile...Disposable...Ready to Use
- Shaft curved properly (uterine sound shaped) for use in anteverted or retroverted uteri (4mm only)
- Centimeter depth markings for cervical stop guide (4mm only)
- Snap-on cervical stop custom set for every patient
- Snap-on cervical stop V-shaped design for easy view of external cervical os
- Patient ambulatory once instrument properly inserted
- Durable "no-crack" luer fitting on flexible collar for convenient injection
- No spring or weights added

TMI1175 Zinnanti Sampler - Endometrial Suction Curette

LATEX FREE

- Malleable, non-metallic instruments
- Blunt tip
- Centimeter markings on the curette
- Solid tapered tip and minimum outer diameter combine for safe and comfortable introduction
- Super suction and sharp curette opening ensures a reliable sample collection
- Optimal sample retrieval
- Single use
- Firm, flexible cannula prevents kinking on insertion
- Small outer diameter simplifies introduction
- Box of 25 also includes 2 Disposable Flexible Cervical Dilators

Also available:

Disposable Flexible Cervical Dilators (Os Finders)

OS-01-025 - Box of 25

OS-01-050 - Box of 50

Disposable Uterine Sounds

US-01-025 - Box of 25

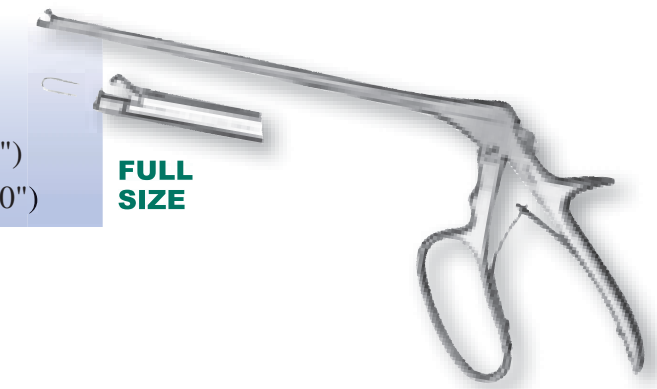

Tischler Biopsy Forceps, Spring Handle

- BF-10-800** Standard 3mm x 7mm Jaw, 20.5cm (8")
- BF-02-100** Standard 3mm x 7mm Jaw, 25.5cm (10")
- BF-25-800** Radiance Standard 3mm x 7mm Jaw, 20.5cm (8")
- BF-25-100** Radiance Standard 3mm x 7mm Jaw, 25.5cm (10")

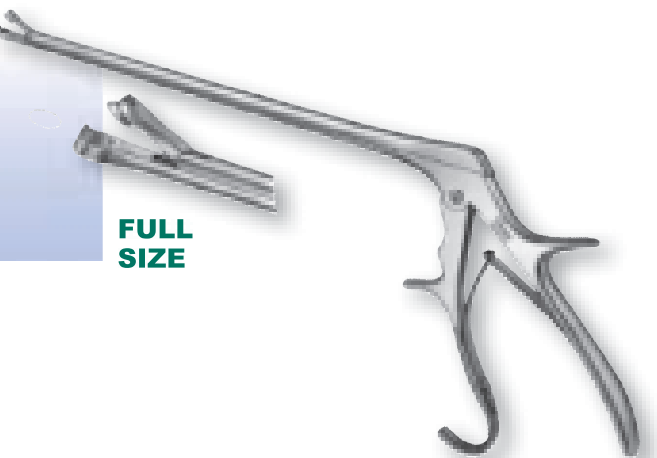

Baby Tischler Biopsy Forceps, Spring Handle

- BF-11-800** Baby 2mm x 4mm Jaw, 20.5cm (8")
- BF-03-100** Baby 2mm x 4mm Jaw, 25.5cm (10")
- BF-26-800** Radiance Baby 2mm x 4mm Jaw, 20.5cm (8")
- BF-26-100** Radiance Baby 2mm x 4mm Jaw, 25.5cm (10")

Burke Biopsy Forceps, Spring Handle

- BF-01-800** Standard 3mm x 7mm Jaw, 20.5cm (8")

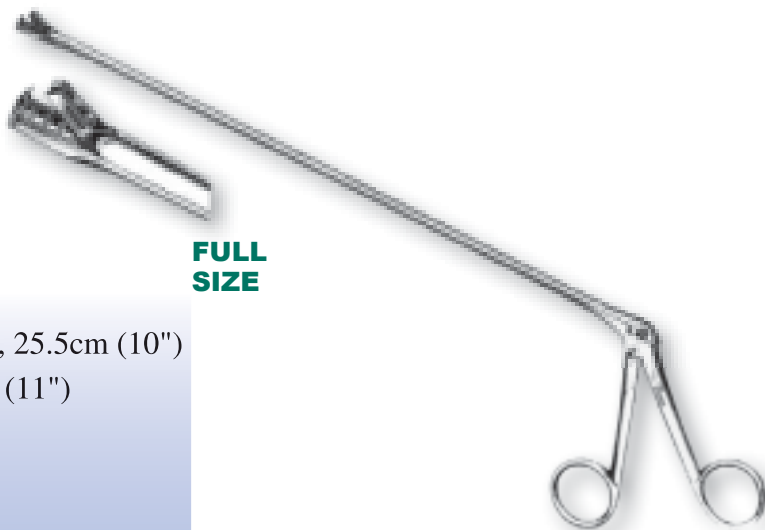

**Radiance: Never Needs Sharpening
Special Titanium Coated**

Kevorkian Biopsy Forceps

BF-07-100 Spring Handle 3mm x 10mm Jaw, 25.5cm (10")

BF-06-110 Standard 3mm x 6mm Jaw, 28cm (11")

- VR-05-625** Breisky Retractor, 16cm x 3.5cm (6.25" x 1.3") Blade
- VR-08-675** Breisky-Navratil Retractor, 17cm x 2.5cm (6.75" x 1") Blade

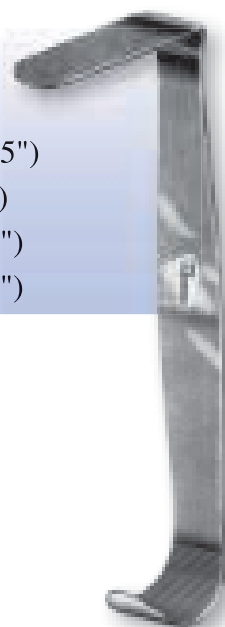

- VR-01-300** Sims Speculum Small, Double Ended, 2.5cm x 4.5cm and 3cm x 7.5cm (1" x 2.5" and 1.25" x 3)
- VR-01-325** Sims Speculum Medium, Double Ended 3cm x 7.5cm and 4cm x 8.5cm (1.25" x 3" and 1.5" x 3.25")
- VR-01-400** Sims Speculum Large, Double Ended, 4cm x 8.5cm and 4.5cm x 10cm (1.5" x 3.25" and 1.75" x 4")

- VR-07-100** Sims Retractor Small, 2.5cm x 6cm (1" x 2.5")
- VR-07-125** Sims Retractor Medium, 3cm x 7.5cm (1.25" x 3")
- VR-07-150** Sims Retractor Large, 4cm x 10cm (1.5" x 4")

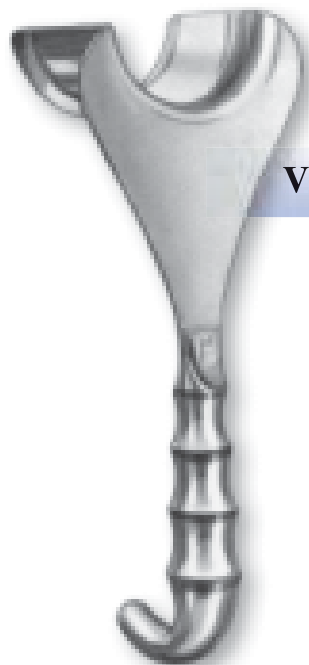

Vaginal Retractors

- VR-09-105** Heaney Retractor Small, 4.5cm x 2.5cm (1.75" x 1") Blade, 27cm (10.5")
- VR-09-675** Heaney Retractor Med., 4.5cm x 2.5cm (1.75" x 1") Blade, 17cm (6.75")
- VR-10-105** Heaney Retractor Large, 7.3cm x 2.8cm (2.75" x 1.25") Blade, 27cm (10.5")
- VR-10-750** Heaney Retractor Med., 7.3cm x 2.8cm (2.75" x 1.25") Blade, 19cm (7.5")
- VR-11-105** Heaney Retractor Large, 8.3cm x 2.8cm (3.25" x 1.1") Blade, 27cm (10.5")
- VR-11-675** Heaney Retractor Large, 8.3cm x 2.8cm (3.25" x 1.1") Blade, 17cm (6.75")

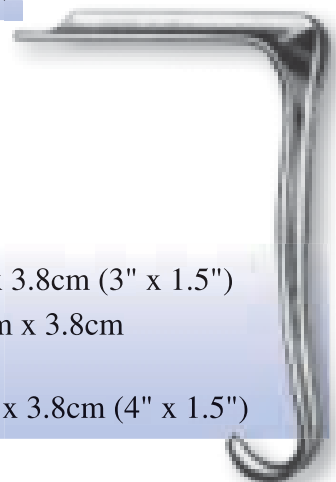

- VR-03-300** Eastman Retractor Small, 7.6cm x 8cm (3" x 1.5")
- VR-03-350** Eastman Retractor Medium, 8.9cm x 3.8cm (3.5" x 1.5")
- VR-03-400** Eastman Retractor Large, 10.2cm x 3.8cm (4" x 1.5")

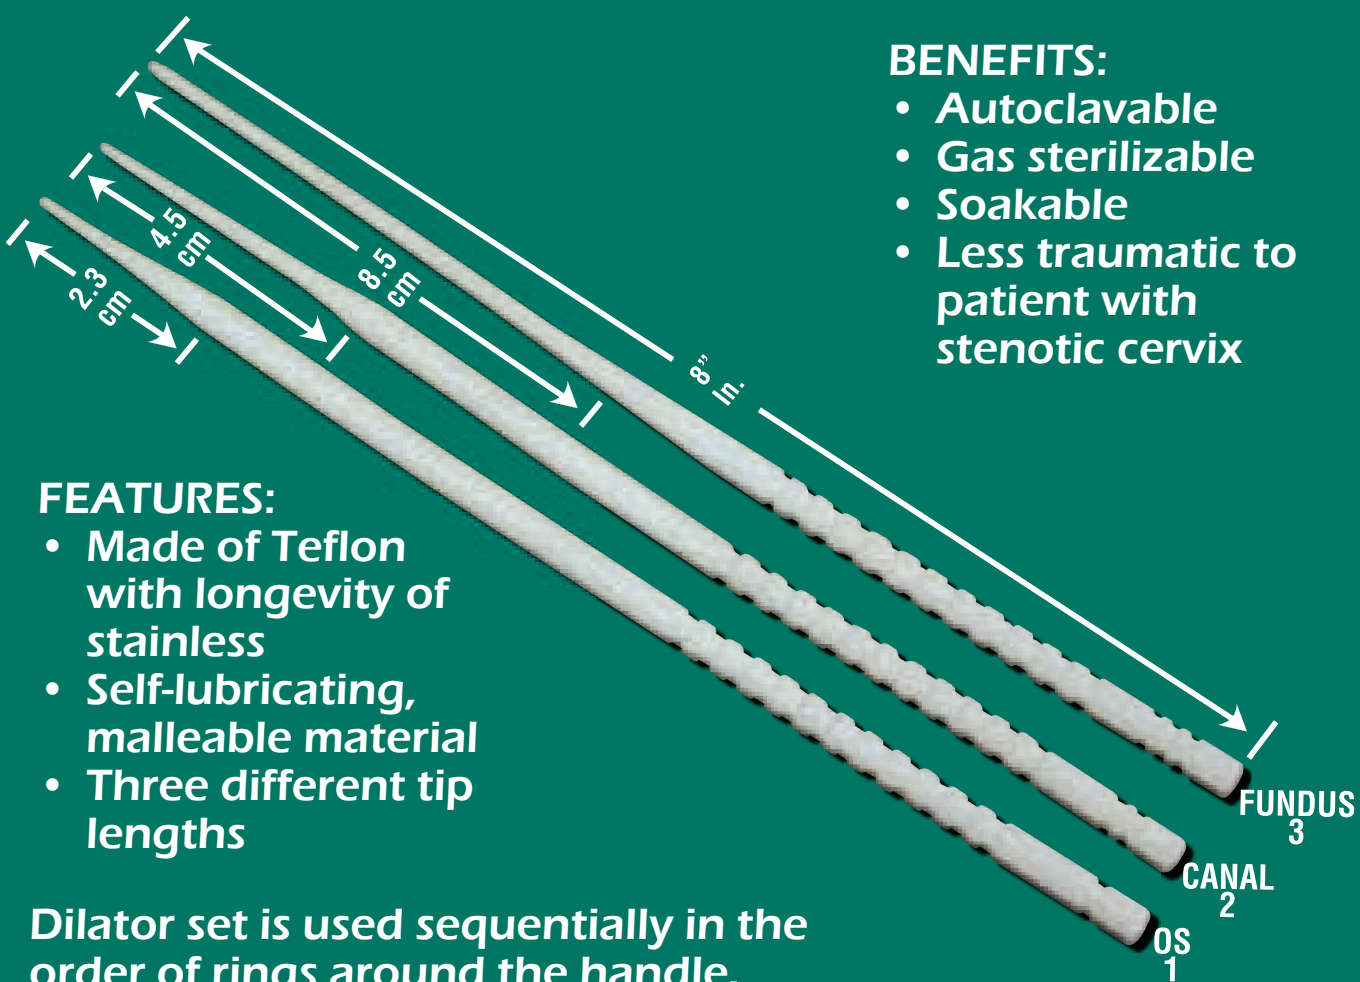

- VR-02-950** DeLee Retractor, Universal, 24cm (9.5")

- VR-06-300** Jackson Speculum Small, 7.6cm x 3.8cm (3" x 1.5")
- VR-06-350** Jackson Speculum Medium, 8.9cm x 3.8cm (3.5" x 1.5")
- VR-06-400** Jackson Speculum Large, 10.2cm x 3.8cm (4" x 1.5")

Uterine Dilators

Reusable Teflon Dilators - Autoclavable

BENEFITS:

- Autoclavable
- Gas sterilizable
- Soakable
- Less traumatic to patient with stenotic cervix

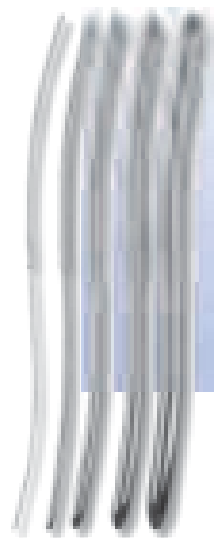

FEATURES:

- Made of Teflon with longevity of stainless
- Self-lubricating, malleable material
- Three different tip lengths

Dilator set is used sequentially in the order of rings around the handle.

- FD-01-100** Cervical Os Finder, Single Ended, Diameter 1.75mm to 3.8mm, Depth 2.3cm, Length 20cm (8")
- FD-01-200** Uterine Canal Finder, Single Ended, Diameter 1.75mm to 3.8mm, Depth 4.5cm, Length 20cm (8")
- FD-01-300** Uterine Cavity Finder, Single Ended, Diameter 1.75mm to 3.8mm, Depth 8.5cm, Length 20cm (8")
- FD-01-500** Flexible Dilator Set of 3, Single Ended, Diameter 1.75mm to 3.8mm, Depth 2.3cm to 8.5cm, Length 20cm (8")

Mini Cervical Dilator Set

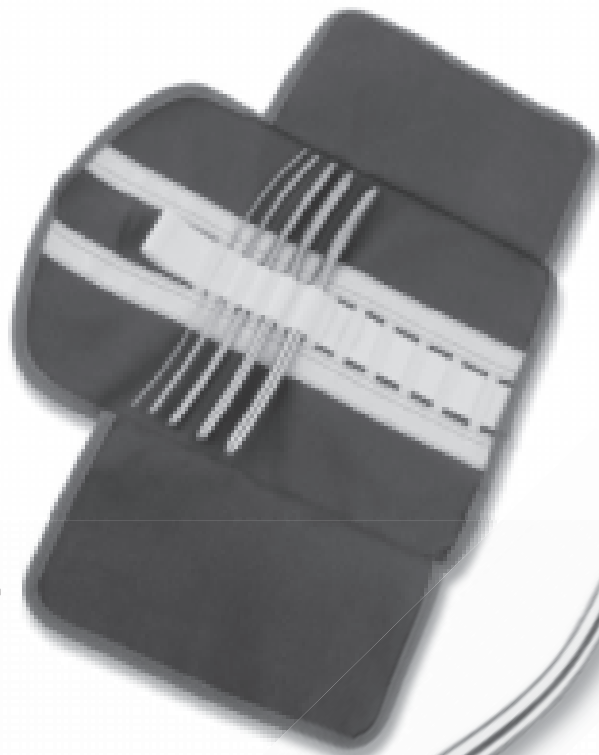

Pratt Mini Dilator Set

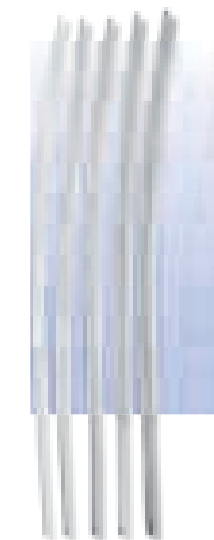

UD-08-100:

Double Ended

- Sizes: 1mm x 2mm
3mm x 4mm
5mm x 6mm
7mm x 8mm
9mm x 10mm
- Stainless Steel

UD-08-100 KIT

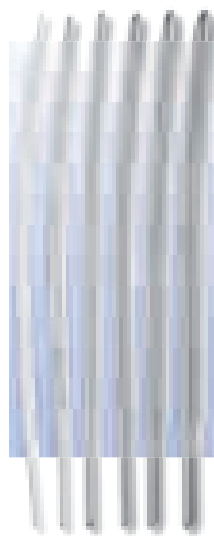

Pratt Mini Dilator Set

UD-07-100:

Single Ended

- Sizes: 1.0mm
1.5mm
2.0mm
2.5mm

- LE-26-150** 15mm x 10mm, Shaft: 13cm (5")

Sterile, Disposable, Each Sold as a Box of 5

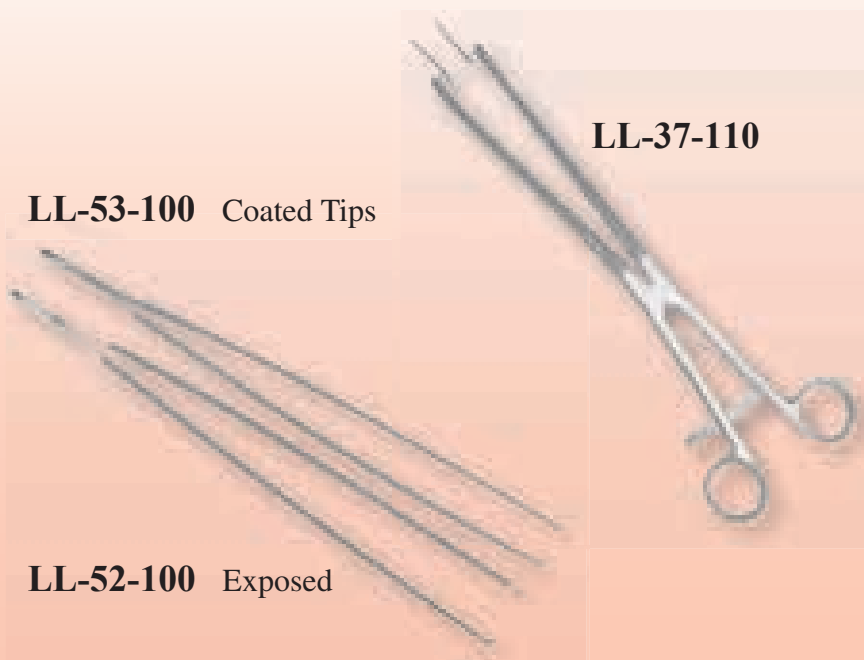

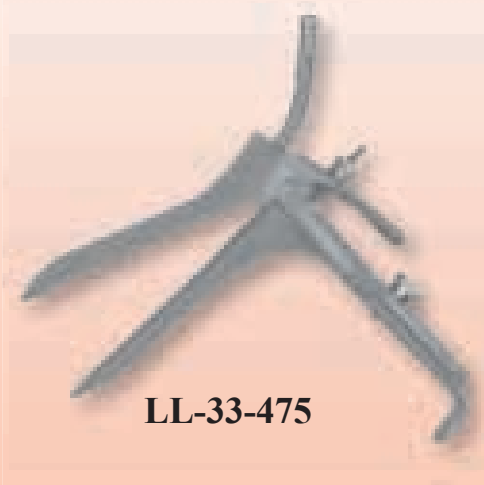

LLETZ/LEEP

- LQ-02-012** Conductive Adhesive Electrode Pads, Disposable, Adult; Box of 12
- LQ-03-025** Conductive Adhesive Electrode Pads, Disposable for ZSI ESU; Box of 25
- LQ-04-025** Conductive Adhesive Electrode Pads, Dual Dispersive Disposable; Box of 25
- LQ-39-025** Conductive Electrode Pads With Cable, Disposable, Cooper; Box of 25
- LQ-40-050** Conductive Electrode Pads Without Cable, Disposable; Box of 50
For Cooper 1000 and 6000 ESU
- LQ-05-020** Hand Switching Pencil and Cord, Disposable; Box of 20
- LQ-09-020** Foot Control Handle and Cord #950, Disposable; Box of 20 For Cooper
- LQ-20-300** Smoke Evacuator Filters for MiniVac; Case of 3
- LQ-21-375** Smoke Evacuation Tubing Assembly; Corrugated Tubing, Reducer,
3/8" Tubing, Box of 3, Assemblies
- LQ-22-006** Smoke Evacuator Tubing, 3/8" Diameter, Case of 6, 61cm (24")
- LQ-23-100** Smoke Evacuator Accessory Kit, 1 Filter and 1 Tubing Assembly
- LQ-26-500** DSE Tubing, Box of 50
- LQ-31-012** Monsel's Solution, 8ml, with Applicator, Package of 12
- LQ-32-012** Lugol's Iodine Solution, 5ml Doses, Package of 12
- LQ-38-101** Versa Vac Smoke Evacuator Filter
- LQ-34-078** Corrigated Tubing, 7/8" x 6'
- LQ-36-010** Reducer for Smoke Evacuator, Disposable, Single Patient Use,
Connects Pre-Filter to Patient Tubing Set, 3/8", Box of 10
- LQ-36-100** Pre-Filter for Smoke Evacuator Replacement Filter for Cooper System 6080, Box of 10
- LQ-35-001** Reducer for Smoke Evacuator, Connects Pre-Filter (LQ-36-100) to
Corrigated Tubing and "s" Tubing
- LQ-33-010** Patient Tubing Set, 6' Disposable Tubing with DSE Tube, 10 Sets per Box

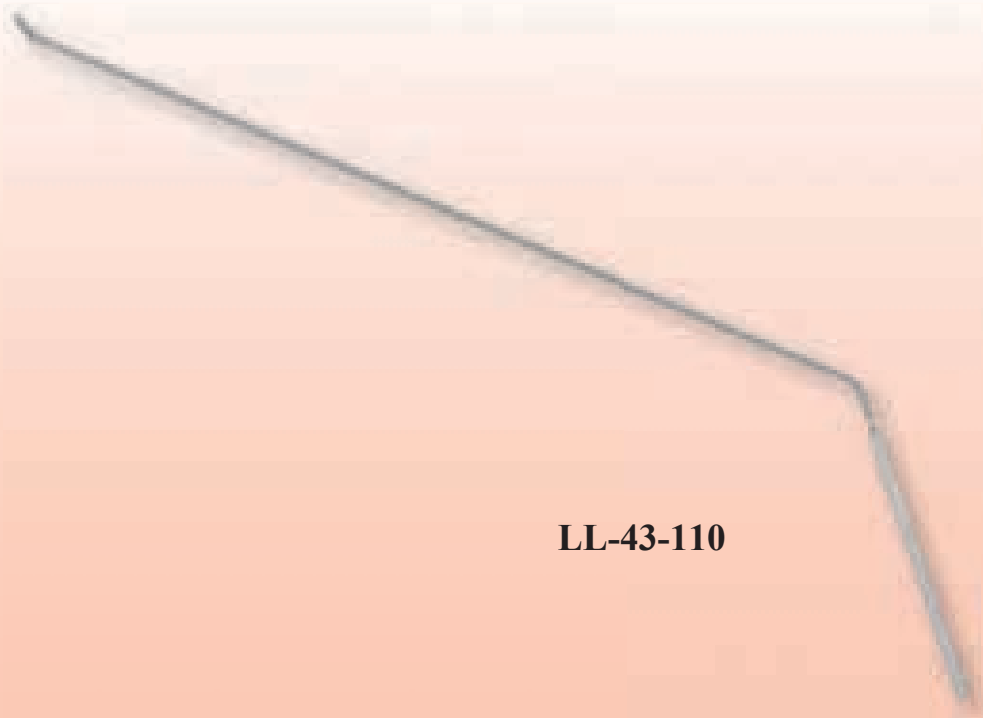

LLETZ/LEEP Instrumentation

- LL-33-700** Graves NonConductive Speculum, XL, 1 Smoke Tube; Size: 7" Long Blades
- LL-33-600** Graves NonConductive Speculum, Supersize, 1 Smoke Tube; Size: 6" Long Blades
- LL-33-475** Graves NonConductive Speculum, Large, 1 Smoke Tube; 12cm x 4cm (4.75" x 1.5")

B&H SURGICAL

Specializing in OB/GYN and GI Products

STERILIZATION AND REPROCESSING FOR REUSABLE TEFLON INSTRUMENT

Institutional device reprocessing should occur in facilities that are adequately designed, equipped, monitored and staffed by trained personnel.

Sterilize per your institutions validated procedures and cycle parameters. The following parameters for cleaning and the four most commonly utilized methods of sterilization are recommended as guidelines for validation.

NOTE: REPROCESSING THESE DEVICES DICTATES THAT IT UNDERGOES A THOROUGH CLEANING PRIOR TO STERILIZATION.

CLEANING □

CAUTION: AVOID USE OF ABRASIVE CLEANERS OR SOLVENTS

1. Rinse the device thoroughly with sterile, purified water to remove any accumulated debris.
2. Hand wash the surface of the device with a using a soft bristled cleaning brush and enzyme cleaner *e.g. Terg-a-zyme solution (Alconox, Inc.)*, to remove visible residual debris.
3. After hand-washing, the surface is to be thoroughly flushed with sterile, purified water until no visible detergent residual remains.
4. Thoroughly dry the device using a sterile wipe.

STERILIZATION □

CAUTION: DO NOT GAMMA STERILIZE.

1. **STEAM/GRAVITY DISPLACEMENT:** Double wrap device in muslin *i.e. CSR blue hospital wr ap* and place (single layer) in a production type steam sterilization vessel. Process at 132 C for a 30-minute cycle.
2. **STEAM/PRE-V ACUUM:** Double wrap device n muslin *i.e. CSR blue hospital wr ap* and place (single layer) in a production type steam sterilization vessel. Process at 132 C for a four minute cycle. **CAUTION: THIS FORM OF STERILIZATION MAY REDUCE THE LIFETIME OF YOUR DEVICE.**
3. **ETHYLENE O XIDE (EO):** Double wrap device in muslin *i.e. CSR blue hospital wrap* and place (single layer) in a production type EO sterilizer. Process at a nominal 600mg/L EO concentration using Oxyfume 2000 (10:90) gas for a full two hour cycle. Immediately following the exposure cycle, aerate for 18 hours at 122 F.
4. **CHEMICAL (CIDEX) STERILIZATION:** Totally immerse the device in Cidex activated glutaraldehyde solution (Johnson & Johnson Medical, Inc.). Expose the device to the Cidex for ten hours at 25 C. Following chemical exposure, rinse and flush the device with copious amounts of sterile water for a minimum of one minute, three separate times.

CARE AND CLEANING OF THE JARCO SELF-RETAINING CANNULA & THE KAHN UTERINE TRIGGER CANNULA

1. HANDLING

All Instruments must be cleaned thoroughly and sterilized prior to their first usage. They should be handled with care during transportation, cleaning, sterilization, and storage. Extra care should be taken when handling tips and removable parts (including instrument rest, tips, screws, locking collars, acorns and stopcock.)

Surgical instruments tend to corrode or malfunction if they come into contact with aggressive or caustic solutions. In cleaning your instruments, please be sure not to use any corrosive cleaning agents or acids, and that the cleaning agent has a neutral pH level.

2. INSPECTION

Prior to each use, please examine each surgical instrument for breaks, cracks, and malfunction. Pay specific attention to the tips and edges, and check the stopcock valve for obstructions. Do not use if damaged.

3. CLEANING & MAINTENANCE

Surgical instruments should be cleaned thoroughly and dried after every use. Clean the instruments and all parts with a nylon brush and mild disinfecting solution to remove all blood and debris. We recommend a high-grade surgical instrument cleaner that is neutral with a pH of 7. Before sterilization of the instrument, rinse off with de-mineralized water, making sure that all cleaning residues are removed. Then dry the instrument thoroughly before the sterilization process. Ensure that all parts are cleaned thoroughly to guarantee the proper function of the instrument. Ultrasonic cleaning is recommended.

4. STERILIZATION

We strongly recommend the sterilization of the stainless steel parts of your cannula in autoclaves at 270 Fahrenheit, 132 Celsius for 15 minutes. All rubber parts (acorn and collar) should be cold soaked. All Teflon® parts (white acorn and tip) may be either cold soaked or autoclaved. When cold soaking use CIDEX™ or equivalent, and follow the manufacturer's recommendations. Hot-air sterilizing and "flash" sterilizing are not recommended.

CARE, CLEANING & STERILIZATION OF NON-CONDUCTIVE INSTRUMENTS

Rinsing and cleaning needs to happen immediately after use for decontamination. Adherent particles may resist cleaning or cause staining.

Instruments must be completely cleaned of all foreign matter with specific care focused on channels and moving parts in contact with body tissue and fluids. Precise cleaning is key prior to sterilization.

1. Follow the "General Maintenance Guidelines" for suitable handling of instruments.
2. Completely soak instruments in cleaning agent.
3. Avoid use of eroding cleaning agents (i.e. bleach).
4. Never clean electrosurgical and laser coated instruments in a glass bead sterilizer.
5. To dismantle, remove the thumbnut holding the yoke/ upper assembly to lower blade.
6. Remove tubing and expel according to hospital protocol if disposable smoke tubing is used.
7. Use warm water and a mild soap.
8. Do not use a harsh cleaning solution.
9. Do not soak coated instruments in CIDEX or other caustic cold sterilization solutions.
10. Cleaning agents and rinses at or near neutral pH (7.0) are recommended.
11. A soft bristle brush (similar to a toothbrush) should be used.
12. Round bristle brushes are recommended to clean inside channels of smoke tubes, if present.
13. Immerse and extensively rinse the instruments in warm tap water to remove cleaning agents.

14. An enzymatic cleaner should be used to remove protein deposits on the instruments. Follow enzymatic manufacturer's instructions and rinse thoroughly.
15. A final rinse of distilled water is recommended.
16. Inspect the instrument coating for nicks or cuts; verify that no metal is visible underneath the coating.
17. Handle with care. Hard contact with other instruments, hard surfaces or sharp objects can damage the non-conductive coating.
18. Delicate hooks or tenacula should receive special attention to avoid breakage
19. Do not place coated instruments in an ultrasonic cleaner.

TO CLEAN:

1. Follow the "General Maintenance Guidelines" for proper management of instruments.
2. Rinse and/or presoak.
3. Clean manually using a mild soap and warm water with soft bristle brushes.
4. Clean the inside channel of the smoke evacuation tube using a round bristle brush with warm water once again.
5. Rinse.
6. An enzymatic cleaner should be used to remove protein deposits on the instrument. Follow enzymatic manufacturer's instructions.
7. Rinse.
8. Dry with clean cloth or gauze and compressed air.
9. Inspect.
10. Prepare for storage and/or sterilization.

NOTE: *Make sure to dry instruments completely with compressed air (including the inside of channels) and/or a dry oven (maximum temperature 280 degrees F)*

STERILIZATION WITH AN APPROVED LIQUID CHEMICAL STERILANT:

1. Instruments have to be cleaned extensively following the above steps before cold sterilization. Cold soak solutions with a 2% glutaraldehyde solution may be used for sterilizing the instruments. Instruments are to be fully submerged. For sterilization times, follow the manufacturer's instructions. Soak and rinse thoroughly in two separate sterile, deionized water baths.
2. Reassembly: Reassemble the yoke to the remainder of the speculum assembly using the thumbnut removed previously.
3. Storage: It is recommended that instruments be stored dry in a moisture free area. The instruments should be stored individually in their shipping cartons or in a protective tray with partitions. If stored in drawers, protect with cloth or gauze.

AUTOCLAVE STERILIZATION:

1. Contact of plastic to bare metal should be avoided.
2. Items should be precisely cleaned of all foreign matter before sterilization following the above steps.
3. Follow the manufacturer's instructions for operation and loading of steam autoclave. There must be direct steam exposure to all surfaces of the instruments being sterilized.
4. Autoclave temperatures should not exceed 280 degrees F (137 degrees C) pressures should not exceed 32 psi (2.2 atmospheres).
5. Instruments should be sterilized in their "Open" position.

6. Gravity Displacement Cycles
 - a. 20-30 minutes at 270-275 degrees F
 - b. 30 minutes at 250 degrees F
7. Pre-Vacuum Cycles
 - a. 3-4 minutes at 270-275 degrees F

ETHYLENE OXIDE STERILIZATION:

1. Items shall be completely cleared of all foreign matter prior to sterilization following the above steps.
2. Instruments should be sterilized in their "Open" positions.
3. Follow the manufacturer's instructions for operation and loading. Direct exposure to all surfaces of the instruments being sterilized in necessary.
4. Recommended Ethylene Oxide Cycle:
 - a. Temperature – 125-130 degrees F
 - b. 50 degree RH (pre-humidity – 60 minutes -0-10 minutes
 - c. Pre Vacuum – 24" Hg +/- 2" Hg
 - d. Gas Pressure – 6-8 psig (550-660 mg L)
 - e. Exposure Time – 4 hours -0-0.25 hours
 - f. Post Vacuum – 24" Hg 2x +/- 2" Hg
 - g. Aeration – 12 -0/+1 hours at 120 degrees F

WARNING:

ALWAYS CHECK INSTRUMENTS BEFORE AND AFTER STERILIZATION TO ENSURE THAT NON-CONDUCTIVE COATING IS UNIFORM: METAL SHOULD NOT BE VISIBLE UNDERNEATH THE COATING. CONTACT BETWEEN EXPOSED METAL AND CHARGED ELECTRODE MAY CAUSE BURN TO PATIENT AND/OR PHYSICIAN.

RECOMMENDED STEPS FOR CLEANING, STERILIZATION AND MAINTENANCE OF SURGICAL INSTRUMENTS

1. RINSING

Immediately after surgery, remove organic materials by rinsing instruments under warm (not hot) running water. Rinse should remove most blood fluids and tissue. Do not process dissimilar metals (stainless, copper, chrome plated, etc.) together.

2. DISINFECTING

To protect medical personnel from contamination during cleaning, immerse instruments completely in an EPA approved disinfectant for approximately 10 minutes. Then rinse again.

CAUTION: Never expose stainless steel instruments to bleach or other corrosive chemicals to disinfect. Exposure to bleach may result in instrument pitting and will void all manufacturer guarantees.

3. CLEANING

All blood, dried body fluids and tissue should be completely removed from the instruments prior to sterilization. Several methods are available.

A. Soak

An enzymatic cleaner bath or a solution of water and neutral pH(7) detergent are effective in removing organic material from instruments. Instruments should be fully submerged for at least 10 minutes. Rinse instruments under running tap water to remove solutions.

B. Ultrasonic Cleaning

Most instruments manufacturers recommend ultrasonic cleaning as the most effective way to clean surgical instruments, particularly those with hinges, locks and other moving parts.

All instruments must be fully submerged. Make sure that "sharps" (scissors, knives, osteotomes, etc.) blades do not touch other instruments. A lid can be used to avoid splashing.

Change solution frequently, at least as often as the manufacturer's recommendation.

Rinse instruments with water to remove the cleaning solution.

Lubricate all hinged instruments which have any "metal to metal" action, at the screw or box lock. A non-silicone, water soluble surgical lubricant is recommended. Do not use industrial oils or lubricants.

C. Automatic Washer Sterilizers

Follow manufacturer's recommendations but ensure instruments are lubricated after the last rinse cycle and before sterilization cycle.

Caution: Needle Holders and Forceps may crack if sterilized with the ratchet in the closed position.

D. Manual Cleaning

If ultrasonic cleaning is not available, observe the following steps:

Use stiff nylon cleaning brushes. Do not use steel wool or wire brushes except specially recommended stainless steel wire brushes for instrument serrated areas, bone files, burs or on stained areas of knurled handles.

Use only neutral pH (pH7) detergents. If not rinsed off properly, low pH (acidic-less 6 pH) detergents breakdown the stainless protective surface resulting in pitting and/or black staining. High pH detergents (alkaline-more than 8 pH) can cause brown stains (phosphate surface deposit) which can also interfere with the smooth operation of instruments. Most brown stains are not rust and are easily removed with stain remover.

Brush delicate instruments carefully, and if possible, separate them from general instruments.

Make sure instrument surfaces are visibly clean and free from stains and tissue. Also inspect each instruments for proper function and condition. Check to make sure that:

Scissor blades glide smoothly all the way (they must not be loose when in closed position). Test by cutting thin gauze or surgical glove material three quarters of length of blade. Scissors should cut all the way to the tips, and not hang up.

Forceps (pickups) have properly aligned tips. Teeth must meet properly- without cracking action.

Hemostats and Needle Holders should not allow light between the jaws when closed in the first ratchet position. (hemostats may show a small opening half way in from the closed tip), lock an unlock easily, and joints should not be too loose. Check needle holders for wear on jaw surfaces.

Suction tubes are clean inside.

Biopsy Punches – Punch a clean hole into tissue paper.

Retractors function properly.

Cutting Instruments and knives have sharp undamaged blades.

After scrubbing, rinse instruments thoroughly under running water. While rinsing, open and close scissors, hemostats, needle holders, and other hinged instruments to make sure the hinge areas are rinsed out, as well as the outside of the instruments.

4. AFTER CLEANING

If instruments are to be stored, let them air-dry and store them in a clean and dry environment.

5. AUTOCLAVING

The sterilizer manufacturer's written instructions for cycle parameters should be followed. In general, though, the most common temperatures and time parameters are:

- A. For gravity displacement cycles, 10 to 25 minute exposure time at 132 to 135 degrees C (270 to 275 degrees F), 15 to 30 minute exposure time at 121 to 123 degrees C (250 to 254 degrees F).
- B. For pre-vacuum cycles, 3 to 4 minutes at 132 to 135 degrees C (270-275 degrees F)
- C. For steam-flush pressure-pulse cycles, 3 to 4 minutes at 132 to 135 degrees C (270-275 degrees F), 20 minutes at 121-123 degrees F (250 to 254 degrees F).
- D. Lubricate all hinged instruments which have any "metal to metal" action, at the screw or box lock. A non-silicone, water soluble surgical lubricant is recommended. Do not use industrial oils or lubricants.
- E. Sterilize instruments either individually or in sets. Individual Instruments – Disposable paper or plastic pouches are ideal. Make sure to use a wide enough pouch for instruments with ratchet locks so the instruments can be sterilized in an open (unlocked) position. Instruments locked during autoclaving can experience cracked hinges (box locks) or other problems because of heat expansion. If you wrap instruments, make sure the towel does not contain detergent residue, which can stain your instrument. Instruments Sets – Unlock all instruments and sterilize them in an open position. Place heavy instruments on bottom of set (when two layers are required). Do not overload chamber because an air pocket may form that hinders steam penetration.

CAUTION: With most portable tabletop autoclaves, at the end of the autoclave cycle- before the drying cycle- unlock the door and open it no more than a crack, about ¼" (6.4mm). Then run the dry cycle for the period recommended by the autoclave manufacturer. If the autoclave door is fully opened before the drying cycle- cold room air will rush into the chamber causing condensation on the instruments that may result in water stains for cause wet packs. Make sure autoclave filters and chambers are cleaned as recommended by the manufacturer.

6. COLD STERILIZATION

Most cold sterilization solutions render instruments sterile only after a 10 hour immersion. This prolonged chemical action can be more detrimental than the usual 20 minute autoclave cycle. If the instruments need to be "disinfected" only, a cold sterilization soak is acceptable, as disinfection will take place in approximately 10 minutes. Check manufacturer' specifications. Also see our warning in using bleach (paragraph 2)

Keep in mind the difference between:

Sterile – an absolute term (no living organism survives)

Disinfected – basically clean. Some organisms may survive.

Always use proper sterilization/cleaning technique to render the instrument in the require condition for use.

CAUTION: For instruments with tungsten carbide inserts, we do not recommend use of cold sterilization solutions. Cold sterilization solutions will deteriorate the instrument's jaw.

B&H SURGICAL

Our Policies

Shipping and Handling

B & H Surgical will attempt to ship all orders promptly and keep you notified of the status of your order.

We offer the following shipping methods:

FedEx Express
FedEx Ground
UPS 3-Day Select
UPS Ground

Returns

Customers on occasion ask us about our return policy. At B & H Surgical we aim for complete customer satisfaction. If you are not completely pleased with your order, we want to hear about it. Let us know if something is wrong and we will do what we can to make it right. If you need to return an item and it qualifies for returning call for an RMA number within 30 days of purchase.
